PDE, Via Tevere 54, I-50019 Sesto Fiorentino [Firenze]
ISBN 978-884674059-5

Contents

1	Random Variables	1
1.1	Experiment and events	1
1.2	Probability axioms	3
1.3	Conditional probability	4
1.4	Total probability	5
1.5	Bayes' theorem (or 1 st -type Bayes' formula)	5
1.6	Independent events	6
1.7	The concept of Random Variable	7
1.8	Events generated by a random variable	7
1.9	Definition of a random variable	9
1.10	Distribution function	10
1.10.1	Classification of random variables	10
1.10.2	Examples of random variables	11
1.11	Probability density function	14
1.11.1	Examples of probability density functions	16
1.11.2	Important probability density functions	17
1.12	Repeated trials	18
1.13	Random points in time	20
1.14	Conditional distribution and density	21
1.15	Total probability and Bayes' formula of 2 nd type	23
1.16	Expected value	25
1.17	Functions of one random variable	25
1.17.1	Variance, moments of a random variable	27
1.17.2	Calculation of distribution and pdf of $\mathbf{y} = g(\mathbf{x})$	28
1.18	Important functions of one random variable $\mathbf{y} = g(\mathbf{x})$	32
1.19	Tchebycheff inequality	34
1.20	Characteristic function	35
1.21	Two random variables	37
1.22	Total probability and Bayes' formula of 3 rd type	40
1.23	Conditional expected values	42
1.24	Independent random variables	43
1.25	Jointly normal random variables	46
1.26	Two random variables functions of two random variables	47
1.27	n random variables	49

1.27.1	Lowering the order of distribution and density	50
1.27.2	Fundamental Theorem for n random variables	50
1.27.3	Conditional densities with n random variables	51
1.27.4	Basic rules for removal of random variables	52
1.27.5	n independent random variables	53
1.28	Conditional independence	54
2	Sequences of random variables	57
2.1	Markoff sequences	57
2.1.1	Four properties of a Markoff sequence	58
2.2	Homogeneous and stationary Markoff sequences	62
2.3	Generation of a Markoff sequence	64
2.4	Martingale	65
2.5	Markoff chains	66
2.6	Transition matrix	67
2.7	Homogeneous and stationary chains	69
3	Stochastic Processes	77
3.1	Basic notions	77
3.2	First and second order statistics	79
3.3	Definitions	83
3.4	Mean, autocorrelation, autocovariance	84
3.5	Special processes	87
3.5.1	Poisson processes	87
3.5.1.1	Poisson counting	90
3.5.1.2	Poisson increments	93
3.5.1.3	Poisson impulses	94
3.5.1.4	Poisson points	95
3.5.2	Telegraph signal	103
3.6	Stationary processes	106
3.6.1	Joint stationarity of processes $\mathbf{x}(t)$ and $\mathbf{y}(t)$	107
3.6.2	Correlations for WSS processes	108
3.7	Ergodicity	109
3.8	Normal processes	117
3.8.1	Random Walk	118
3.8.2	Wiener-Lévy	121
3.9	The reflection principle for Wiener-Lévy	122
3.10	Transformation of stochastic processes	132
3.10.1	Time invariant systems with no memory (memoryless)	133
3.10.2	Stationarity of the output	137
3.10.3	Time-invariant memoryless transformations of practical interest	137
3.11	Linear transformations	144
3.12	Differentiator	149
3.13	Power spectrum of WSS processes	152
3.13.1	Power spectra with linear systems	154

3.13.2	Power spectra from significant linear systems	157
3.14	Quadrature filter	160
3.15	Hilbert transform	163
3.16	Analytic signal	164
3.16.1	Relations among spectra	165
3.17	Rice representation of a process	166
3.18	Shot noise	170
3.19	Thermal noise	172
3.20	Fourier series representation	173
3.21	Karhunen-Loève expansion	176
4	Queueing Theory	183
4.1	Little's formula	186
4.2	Immediate service ($M G \infty$)	192
4.3	Markoff processes	197
4.3.1	Classification of Markoff processes	197
4.3.2	Continuous-Time Markoff chains	198
4.3.3	Birth-Death processes	205
4.4	$M M 1$ Queue	207
4.5	$M G 1$ Queue	214
4.5.1	Empty period, busy period	223
